climate controls vegetation in t degree, is quite svident, and mally true that vegetation isself equally true that vegetation facely a marked effect upon the glimpic, to firty line, if exect as inclusance t the wind. Where the land is of trees, the wind has an unit stad sweep; and where this pre-yand in wishes, the eliment is not

Without this protection there is the maplesements of hereing a gale for ord blowing about on a gaze, the constitution of the wind entered the door, the discrepance of the word around the control of the second of thing of contage its direction, is about at the fargotten that air motion proless more chilliness than the same sir at rest. Wet your flag-eard hold it up in the still are, and you will hardly feel the cold; but vineg it around, and the head will be rapidly chilish. The difference between the distants of a smally region and so silelessed from driving contents of an interest the difference for the content of an its equality great.

Again, vegetation affects climate by institing expectation of moister.

Again, vegetation effects climate by insuring evapore ton of moisture.—
Many years up. Hamboldt declared, that most in all chunter, by stripping the hills of trees, were preparing for themselves two calanities, wis: they must of fuel and the want of water. The evaporation from trees produces a cool and twoist local atmosphere.—
The overhanging boughs prevent the too rapid evaporation of moisture from the ground, and its designation. from the ground, and the service of actify the stand. The nonrect of actify all brooks and creeks are to be found a prings among the thin; and by cutting off the tree which have all the away are reshadoured then, the moint-leave is rapidly exporated, and the training borerow. If not dried up, the prings borerow, if not dried up, and arising time. Rey of a farmer will arising time. They old farmer will be a service of the s r ground, and the dissipation and. The sources of heads

do not improve on pastures.—
